

Variety Profile Comparison Tool Guide

Go to www.nvtonline.com.au using Internet Explorer (it only works in Internet Explorer).

Click on the *Variety Profile Comparison Tool* on the bottom left, a new window will open.

This tool will allow for side by side comparison of varieties.

Step 1:

Select the *Crop* of interest. It is not necessary to select *Crop type* but the option is available if you have a specific crop type requirement.

Step 2:

Select a *State*. It is not necessary to select a *Region* but the options is available if needed.

Step 3:

Select the varieties (up to three at a time) of interest, and side by side comparison will appear.

Selecting more parameters will result in more filtered / constrained results . A different *Crop*, *Crop type*, *State*, or *Region*, can be chosen at any time, this will reset the variety selection.

If *Region* selection is not available (i.e there is no regional separation) the *Region* drop down menu will not drop down).
