Upgrade to higher yields on lower rainfall

InVigor® R 3520 delivers exactly what the InVigor brand stands for – the highest levels of performance among hybrids. When the going gets tough, InVigor R 3520 really gets going, which is why it’s such a significant upgrade from the previous short-season hybrid options.

- Exceptionally strong performance in conditions where yields average under 2 t/ha.
- Still matches the top short-season varieties in wetter seasons when conditions favour higher yields.
- Use Pay@Harvest to help manage cash flow.
- Backed by Replace MySeed™, the unique Bayer program offering 100% seed replacement if the crop fails to establish for reasons beyond your control (as listed in the terms and conditions).

* Provisional rating.

InVigor R 3520 is now the hybrid variety of choice for early season areas, where it consistently outperforms previous leading short-season varieties.

Seed treatment options

- **Poncho Plus**: Systemic broad-spectrum control of wireworm, cutworm, aphids, redlegged earth mites and blue oat mites, and suppression of lucerne fleas.
- **Jockey Stayer**: Vital early-season blackleg suppression.
- **EverGol Xtend**: Control of rhizoctonia and fusarium for improved plant emergence and increased canola biomass.

Suggested growing areas for InVigor R 3520

Available with either: **Jockey Stayer** Vital early-season blackleg suppression. **EverGol Xtend** Control of rhizoctonia and fusarium for improved plant emergence and increased canola biomass.
Top yields at early timings

These results show that InVigor R 3520 represents a big step forward for short-season varieties. The 2016 NVT sites confirmed what internal trial work had already indicated: that InVigor R 3520 is the new standard in early-season performance.

![Graph showing yield comparison](image)

Data from all 11 early NVT sites in 2016: Buntine, Condobolin, Corrigin, Greenough, Hopetoun, Jerramungup, Kellerberrin, Mingenew, Nyabing, Trangie, Ultima.

When the going gets tough...

Across the 2015 and 2016 Bayer breeding sites, InVigor R 3520 excelled. Both InVigor R 3520 and 43Y23 produced significantly stronger yields than Hyola 404 under all conditions. When the site average dropped below 2 t/ha, InVigor R 3520 showed its clear superiority over 43Y23 in making the best of challenging conditions.

Great in a good season with an even bigger advantage in an average one

2015 sites included: Carnamah, Kellerberrin, Longerenong, Meckering, Nyabing, Temora.
2016 sites included: Cunderdin, Geraldton, Lah, Longerenong, Meckering, Mingenew, Scaddan and Wail.
All Bayer early breeding trial data used where trial mean yield was less than 3 t/ha.
