

2018 INTERIM QUARANTINE REPORT

Queensland

DO NOT REPRODUCE, REPLICATE OR COPY

Important Information for Quarantined (Unreleased but not abandoned) Trials

To ensure the results of NVT remain robust, relevant and of the highest quality, it is agreed policy to exclude quarantined trial data from the published reports. Frost, wind and hail damage and drought events are random, uncontrollable, unpredictable and extremely variable in both timing and severity of the damage caused. Variety tolerances to frost and many other random climatic events cannot be measured or gauged in field based NVT.

****WARNING****

Data presented within this report has been made available to provide growers with a transparent account of the fate of unreleased but not abandoned NVT trials. The data is of no value for the purposes of head to head variety comparison and will not form part of the trial data for the NVT website, database and app reporting systems. It should not be used for any variety selection decisions and it has been excluded from the NVT Long Term MET analysis.

Replication of this data is strictly prohibited, and it **MUST NOT** be used by ANY parties for producing variety brochures and marketing material, sowing guides, grower notes or ANY OTHER publication or communication activities.
